IQL — IMAGING QUALITY LOG

Identification, purpose and classification guide

SIMULATED · v0.6

STUDY / PROTOCOL	CIP VERSION	SITE / CODE	IQL RECORD ID / REVISION
GLENOS-01 / GS-2026-01	CIP v4.2	Riverside Orthopedic Center / 014	IQL-014-10 / r1
REVIEW PERIOD / CUT-OFF DATE	**IMAGING CHARTER / MANUAL ID AND VERSION**	**MODALITIES AND TIME POINTS COVERED**	**IMAGING UNIT / EQUIPMENT**
Oct 2026; cut-off 31 Oct	GLENOS Imaging Manual v2.0	Shoulder XR at screening, day 1 and 6 weeks; CT at screening	Riverside Radiology room 2 (DR); ward portable unit
ARCHIVE AND TRANSFER ROUTE (PACS, SPONSOR PORTAL)	**LOCAL IMAGING REVIEWER / ROLE**	**LOG OWNER / ROLE**	**CONTROLLED RECORD LOCATION**
Hospital PACS; sponsor portal GS-IMG	Dr Lena Ortiz / Radiologist	Tom Reyes / Radiology research tech (P-09)	ISF tab 7 (Imaging) / IQL-014-10

A Purpose and Use

Record each required image set when it is acquired or first available, against the sponsor imaging charter or manual: timing, completeness, technical quality, the local use decision and where the images are kept.

Section C is the log: one row per set, on as many log sheets as needed. Sections D to G are completed once per review period and cover every set logged in it. The record that uses the set (PSEAR, ICDL or PFVR) keeps its consequence for the participant; the IQL keeps the technical assessment.

Unit of analysis	Decision supported	Inputs	Outputs
One image set: one participant, one time point.	Whether the set is complete, adequate and usable for its stated purpose.	Imaging charter or manual; the images and their metadata; the linked PSEAR, ICDL or PFVR.	Set status for the linked record; set counts for the FUCR and the PIR; routes for open issues.

B Image-Set Classification Guide

Illustrations only, not acceptance thresholds. Apply the approved Imaging Charter/manual. Assess each dimension separately; these examples are a reminder, not fields to complete.

Dimension	What to distinguish	Example / recording reminder
Timing	Assess acquisition against its applicable window; retain the actual date.	Window ends 24 Sep; acquired 26 Sep: Outside. Later recovery does not make the original acquisition timely.
Set completeness	Compare required views or sequences with what was actually acquired.	Two of three required views: Partial. Technically clear images do not establish a complete set.
Technical quality	Assess positioning, coverage and other sponsor-defined technical criteria.	All views present, but positioning limits assessment: Limited. No images available, or not yet reviewed: Not assessed (local use is then normally Pending).
Local use decision	Record whether the set can support its stated local purpose, including any restriction.	A necessary second review is outstanding: Pending. Not usable means the set was assessed and cannot serve its stated purpose. Limited use needs a documented permitted purpose; it does not establish central acceptance.
Set relationship	Identify a repeat or supplemental set and link it to the original.	A repeat gets a new Set ID and names the original in "Related set". The original entry, with its timing, stays as recorded.

GLENOS-01 / 014	IQL-014-10 / r1	Oct 2026	1 / 1

C Image-Set Quality Log Against Sponsor Imaging Requirements

One row per image set. Link the PSEAR, ICDL or PFVR that uses it, and state the purpose for which the set is judged. Use Resolution / Route ID only for an exception, repeat, second review or other response; otherwise enter N/A. Do not rely on a set for a use that remains pending. Local acceptance does not establish central acceptance.

Set ID	Participant / Time Point	Linked Record ID	Purpose	Set Type / Related Set	Modality / Required Set	Window / Acquired	Timing	Completeness	Technical Quality	Local Use	Archive	Reviewer / Date	Resolution / Route ID

Continue image-set IDs on additional log sheets. Use IQL Record ID + set ID for unique links. Retain the original entry and cross-reference any repeat acquisition.

D Periodic Imaging-Quality Summary and Handoff

Summarize the reviewed image sets. For each aspect, give the number of sets affected out of the N reviewed above; a set may appear in more than one row. These set-based counts go to the FUCR (follow-up sets) and the PIR. Refer recurring or unresolved issues to the owning record without duplicating FUCR indicators or a CAPA plan.

IMAGE-SET IDS REVIEWED (RANGE)	DISTINCT IMAGE SETS REVIEWED (N, PER SET)
Sets 01-05, log sheet 1 of 1	5 sets (4 participants)

Quality Aspect	Sets Affected	Finding or Linked Route
Set completeness — partial or missing	1	Set 04: axillary view not taken (pain). Repeated as set 05, complete.
Technical quality — limited or non-conforming	1	Set 02: AP rotated, liner seating not visible. R01.
Local use — pending or not usable	1	Set 04 pending until the repeat; closed by set 05 on 28 Oct.
Timing — acquired outside its window	1	Set 03 taken on day 52. Deviation DEV-014-007; reaches the FUCR through the PFVR.
Repeat acquisition / second review required during period	2	Set 05 repeats set 04. Set 02 read again by the radiologist after the dislocation (SART-014-005).
Scheduled time unsuitable for a reproducible position (raised with the sponsor)	1	Day-1 AP is taken on the ward with the arm in a sling; rotation cannot be reproduced. Raised with the sponsor 30 Oct (query Q-IMG-12).

E Image-Set Resolution and Linked Route

Open a line only for a set with an issue, limitation, repeat, second review or route. Record immediate resolution and evidence of the resulting use decision. Cite a CAPA, risk, deviation, safety or sponsor record when that route is needed. Keep this response open until the local resolution or required handoff is documented.

Resolution ID / Set ID	Issue and Immediate Response	Evidence / Updated Use	Linked Record	Owner / Due Date	Status
R01 / 02	AP rotated; liner seating not visible on the only post-op image before the dislocation. Second read 29 Oct.	Seating not assessable; use limited to the clinical check. No repeat possible (revised 28 Oct).	ICDL-014-005; SART-014-005; Q-IMG-12	L. Ortiz / 15 Nov	☐ Open ☐ Resolved ☒ Handed off
R02 / 03	Taken on day 52 (participant travel). Visit date confirmed with the PFVR.	Images adequate; usable for clinical follow-up, not for the 6-week endpoint.	PFVR-014-0003-W6; DEV-014-007	M. Silva / 5 Nov	☐ Open ☒ Resolved ☐ Handed off
R03 / 04, 05	Axillary view missing (pain). Repeat booked inside the window.	Set 05 on 28 Oct, complete and usable. Set 04 kept as recorded.	PFVR-014-0004-W6	T. Reyes / 28 Oct	☐ Open ☒ Resolved ☐ Handed off
					☐ Open ☐ Resolved ☐ Handed off

F Current Period Imaging-Quality Conclusion

Select the status reflecting the highest unresolved issue in the reviewed scope; it covers only the sets reviewed in this period. This conclusion concerns local imaging quality and outstanding routes, not participant eligibility or central endpoint adjudication.

Conclusion	Meaning / Response	Select One	Conclusion Date / Next Review
Controlled / no open issue	Reviewed entries support their documented local use; no unresolved quality issue or handoff is known.	☐ Select	
Controlled with limitation	A documented limitation permits the defined local use, with any required conditions or follow-up identified.	☐ Select	
Resolution / handoff pending	A repeat, second review, traceability correction or linked quality response remains open.	☒ Select	31 Oct 2026 / next 30 Nov
Use restricted / escalated	At least one set remains restricted for its intended use or requires PI, safety, sponsor or other governed review.	☐ Select	

Scope / Affected Image-set IDs / Basis and Open Routes

R01 handed off: the day-1 ward image cannot show liner seating, and set 02 is the only post-op image of 014-0005 before the dislocation. Sponsor asked (Q-IMG-12) whether the day-1 AP can be taken in the radiology suite, out of the sling. R02 closed as a deviation; R03 closed by the repeat. No open issue in sets 01, 04 and 05.

G Accountable Local Review

The local imaging reviewer signs this review. Obtain PI review when required by the CIP or sponsor instructions, or when an unresolved restriction, repeated failure, safety route or impact on an eligibility/endpoint decision requires PI attention.
