CCDM - Criticality-Coded Delegation Matrix

Site-defined task requirements, delegation boundaries and supervision

CCDM · v0.2

Study / protocol	Site / code	CCDM record ID	Record revision
Applicable CIP / protocol version	**Task / process scope**	**Matrix owner / role**	**Review date**
Review basis / type	**Approval status** ☐ Approved ☐ With restrictions ☐ Not approved	**Effective date**	**Next scheduled review**
Supersedes - record ID / revision		**Change trigger / affected scope**	
Controlled record location / included matrix sheets			

A Purpose and Use - site-defined delegation matrix

Purpose and Use: Use one controlled CCDM for a defined site, study and revision. The site identifies its tasks and decisions, assigns criticality and supervision, and records qualifications, permitted boundaries and escalation triggers for approval. The approved matrix defines the task requirements applied in training requirements, person-task assignment and release records. It supports, but does not replace, PI oversight, risk assessment, individual competency evidence or task release.

Element	Complete when	Record / link
Unit of analysis	One controlled matrix for one defined site, study and revision; one row in F for each task or decision.	Record ID, revision, scope and current task inventory.
Decision supported	Approve which tasks are retained or delegable, with the required qualification, supervision, boundaries and escalation.	Site-completed F rows, approval status and any restrictions.
Inputs	Current CIP/protocol, site roles, risk controls, sponsor requirements and applicable procedures.	Controlled IDs/versions for POT, SRR and relevant specialist records.
Outputs	An approved task reference for training requirements, person-task assignment and release, with traceable revision control.	Feeds DTRM (training per task), RACI (who takes each task, using these codes), TRE (requirements checked at release) and POT (what requires the PI).

B Scope boundary and interfaces

Control / interface	What it defines or evaluates	Relationship to CCDM
RACI	Who is responsible, accountable, consulted and informed for each task, with role holder, backup and acceptance.	CCDM sets how critical each task is and how much supervision it needs; RACI assigns people using those codes.
DTRM / TRE	Training each role or task requires, and the release of each person.	CCDM defines task requirements; it does not demonstrate individual competence or release a person.
SRR	Site risk identification, assessment and control follow-up.	CCDM records the resulting task boundaries and supervision; it does not replace risk assessment.
POT / PI oversight	PI accountability, review arrangements and final decision boundaries.	CCDM does not transfer PI accountability to delegated staff.
Specialist records	SCR, ICDL, SIRR/IQL, SLCT or other records relevant to the site's task scope.	CCDM references applicable qualifications and controls; it does not replace their evidence.

CCDM - Criticality-Coded Delegation Matrix

Criticality, supervision and controlled approval

C Criticality code definitions

Code	Decision boundary	Delegability	Allowed supervision levels	PI trigger
C1	PI-final decision or accountability cannot be transferred.	**Not delegable.** Staff may prepare information or perform administrative support only.	**S0** only.	Any ambiguity, exception, safety concern or disagreement.
C2	Material clinical, procedural, device or endpoint activity requiring active PI review.	Delegable only within a defined boundary after task-specific release.	**S1** or **S2**.	Out-of-boundary case, complication, deviation, unexpected result or recurring concern.
C3	Routine operational activity with no independent PI-final decision.	Delegable after qualification, current training and demonstrated competence.	**S2** or **S3**.	Uncertainty, repeated failure, missed window, participant concern or data-quality signal.

D Supervision levels

Level	Name	Operational meaning
S0	**PI-retained**	The delegated person may support preparation but may not perform the final decision or act independently within the task.
S1	**Active PI review**	The person may perform defined steps, but the PI or named specialist reviews specified outputs before or at the defined decision point.
S2	**Defined supervision**	The person may perform the task after release, with a named supervisor, stated restrictions and case-level escalation triggers.
S3	**Routine oversight**	The person may perform the task independently within current instructions; performance is reviewed periodically through normal quality controls.

E Matrix review and approval

Review the matrix when protocol, procedures, devices, risks, task scope, PI/supervision coverage or relevant quality signals change. The owner assesses affected rows and release records. The PI or accountable approver authorizes the matrix and any restrictions before its effective date.

Approval check	Yes	No	Evidence / action / restriction
All tasks have CtQ domain, code, supervision, qualifications, boundaries, escalation and record links.	☐	☐	
Task requirements agree with current protocol, risk controls, oversight and applicable procedures.	☐	☐	
RACI assignments and TRE release records will reference this approved CCDM record ID and revision.	☐	☐	
The review date, change triggers, controlled location and any unresolved restriction are documented.	☐	☐

CCDM - Criticality-Coded Delegation Matrix

Site-completed task matrix / continuation sheet

Study / site	CCDM record ID / revision	Effective date	Matrix sheet number / total sheets

F Controlled task, criticality and supervision matrix

Use one row per task or decision, with a task ID (T01, T02...) that the DTRM, TRE and RACI cite. Separate activities with different decision boundaries; for inseparable activities, apply the highest relevant criticality. Define the required supervision and escalation for each row.

Task ID	Task / decision	CtQ domain	Code	Supervision level	Minimum role / qualification	Permitted boundary	PI / specialist escalation trigger	Linked controlled record

If more tasks are needed, reprint this page, number each matrix sheet and include all sheets in the final approved CCDM.
