SCR - Surgical Credentialing Record

Surgeon credentialing for the study procedure

SIMULATED · v0.5

Study / protocol GLENOS-01 / GS-2026-01	**Site / code** Riverside Orthopedic Center / 014	**SCR record ID** SCR-014-03	**Record revision** r1
Surgeon name / staff ID Dr Paulo Teixeira / ST-014-03	**Role ID (DTRM profile) / function** P-02 / Operating surgeon	**Anatomical field / procedure** Shoulder / reverse shoulder arthroplasty	**Date opened** 22 Sep 2026
CIP version CIP v4.2	**Device / IFU version** GLENOS reverse shoulder system / IFU v2.0	**CCDM surgical task ID** T03 (C2 / S1 + S2)	**Credentialing assessor (name / role)** Dr Lina Costa / Senior shoulder surgeon
Sponsor entry criteria / site qualification reference Sponsor surgeon entry criteria SEC-GS-01 v1.0 (CIP v4.2); site qualification visit report SQV-014, 2 Sep 2026			

A Purpose and use

The SCR records one surgeon's credentialing decision for the study procedure: whether the surgeon's standing, procedure-specific experience and case mix meet the sponsor's entry criteria, which scope follows, and which temporary controls apply. It verifies existing privileges and does not grant them.

Complete it at start-up, before the surgeon's TRE release and first study case, and keep it current with the reassessment log (Section G). The decision is recorded as a qualification row in TRE Section B; the RACI assigns the surgical task only to a surgeon with a current SCR and TRE release. Check the current decision before each case and escalate a case outside it to the PI (POT).

Element	Content	Record / link
Unit of analysis	One surgeon, one study procedure, one record revision.	SCR record ID; surgeon and Role ID.
Decision supported	Credentialed, conditional, restricted or not credentialed, with the scope and temporary controls that follow.	Sections D and E.
Inputs	Sponsor entry criteria; specialty status, privileges and experience in the field; comparable procedures, recent volume and case complexity.	Sources cited in Sections B and C.
Outputs	The credentialing decision for TRE Section B, kept current after each reassessment trigger. Device-specific release is recorded in the TRE.	Sections E, F and G.

B Professional eligibility

Element	Sponsor criterion	Evidence / reference	Valid through	Result	Restriction or note
Specialty status and license / registration	Board-certified orthopedic surgeon; current license	License MED-48213; board certificate ORTH-2019-114; verified 22 Sep 2026	31 Dec 2027	☑ Met ☐ Not met ☐ N/A	N/A
Institutional privileges for the procedure	Institutional privileges for shoulder arthroplasty	Riverside privileges PRIV-014-PT, shoulder arthroplasty including reverse	30 Jun 2027	☑ Met ☐ Not met ☐ N/A	N/A
Experience in the anatomical field	At least 3 years of shoulder practice	CV-PT-2026: 4 years of shoulder practice after fellowship	Annual	☑ Met ☐ Not met ☐ N/A	N/A
Other protocol or institutional prerequisite	GCP certificate; conflict-of-interest disclosure	GCP-PT-2025; COI-PT-2026 (no conflict declared)	14 Mar 2028	☑ Met ☐ Not met ☐ N/A	N/A

SCR - Surgical Credentialing Record

Procedure-specific competence and scope

SIMULATED · v0.5

C Procedure-specific competence

Element	Sponsor criterion	Evidence and period	Assessor / date	Result	Condition or note
Comparable procedures	15 or more shoulder arthroplasties in 24 months, 5 or more reverse	Case log CL-PT-2026: 18 arthroplasties, 11 reverse (Oct 2024 to Sep 2026)	Dr L. Costa / 24 Sep 2026	☑ Adequate ☐ Conditional ☐ Insufficient ☐ N/A	N/A
Recent volume and recency	Active shoulder practice in the last 12 months	4 reverse cases in the last 12 months; last case 2 Sep 2026	Dr L. Costa / 24 Sep 2026	☐ Adequate ☑ Conditional ☐ Insufficient ☐ N/A	Low recent reverse volume: proctoring in Section D2.
Cases of similar complexity / indication	Primary reverse arthroplasty for cuff tear arthropathy	9 primary cuff tear arthropathy cases; no glenoid augment or revision cases	Dr L. Costa / 24 Sep 2026	☐ Adequate ☑ Conditional ☐ Insufficient ☐ N/A	Complex cases deferred: lower-complexity cases in Section D2.
Other evidence (operative video, observed case)	None required by the sponsor	Two operative videos reviewed (VID-PT-01, VID-PT-02)	Dr L. Costa / 24 Sep 2026	☑ Adequate ☐ Conditional ☐ Insufficient ☐ N/A	N/A

D Credentialed scope and temporary controls

D1 · Credentialed scope	
Study procedure (CCDM task ID)	T03 Reverse shoulder arthroplasty per surgical technique
Cases this surgeon may operate	All CIP v4.2 indications for primary reverse shoulder arthroplasty
Standing exclusions for this surgeon (beyond the CIP)	None beyond the CIP

D2 · Temporary controls (Conditional decision only)

No.	Control	What it requires (who, how many cases)	Ends when
1	☑ Proctoring ☐ Co-surgery ☐ Lower-complexity cases ☐ Other	Dr L. Costa (P-02 holder) present at the first five study cases	The fifth case is reviewed in the SLCT with no technical deviation needing escalation
2	☐ Proctoring ☐ Co-surgery ☑ Lower-complexity cases ☐ Other	Primary cases without glenoid bone loss needing augmentation	The same review, after the fifth study case
3	☐ Proctoring ☐ Co-surgery ☐ Lower-complexity cases ☐ Other		

Close each control in Section G when its end criterion is met. Device-specific release (training on the system, its instrumentation and workflow) is recorded in the TRE for the CCDM surgical task, which cites this SCR in Section B.

SCR - Surgical Credentialing Record

Credentialing decision and approval

SIMULATED · v0.5

E Credentialing decision

☐ Credentialed	☑ Conditional	☐ Restricted	☐ Not credentialed
Full scope in Section D1, with no temporary control.	Scope in Section D1 with the temporary controls in Section D2, until their end criterion is met.	A narrower standing scope (exclusions in Section D1) with no end date; changes only after a reassessment.	May not perform the study procedure.

Mark one decision. Conditional is temporary and ends with its criterion; Restricted stands until a reassessment in Section G changes it. If both apply, mark Restricted and list the controls in Section D2.

Assessment date	Effective from	Next scheduled review (at most 12 months)
24 Sep 2026	25 Sep 2026	24 Sep 2027

Residual uncertainty not resolved by the sponsor criteria, and how it is closed before the first case

Volume criteria met, but recent reverse volume is low (4 cases in 12 months) and the surgeon has not used the GLENOS system. Closed by the temporary controls in Section D2: the first five cases are proctored and limited to primary cases without glenoid augmentation, then reviewed with the SLCT.

Rationale

Standing, privileges and prerequisites confirmed (Section B). Comparable experience adequate; recency and complex-case experience limited (Section C). Conditional credentialing with the temporary controls in Section D2 until their end criterion is met.

If the surgeon is the PI, the credentialing assessor is another credentialed surgeon, the institution or the sponsor, and the assessor signs as approver.

F Approval

Credentialing assessor

Name / role: Dr Lina Costa / Senior shoulder surgeon

Signature / date:

L. Costa 24 Sep 2026

PI / accountable approver

Name / role: Dr Alex Morgan / PI

Signature / date:

A. Morgan 25 Sep 2026

Surgeon (acknowledgment)

Name / role: Dr Paulo Teixeira / Operating surgeon

Signature / date:

P. Teixeira 25 Sep 2026

SCR - Surgical Credentialing Record

Reassessment log / continuation sheet

SIMULATED · v0.5

SCR record ID / revision	Surgeon (Role ID)	Effective date	Sheet number / total sheets
SCR-014-03 / r1	Dr Paulo Teixeira (P-02)	25 Sep 2026	1 / 1

G Reassessment log (continuation sheet)

Record every reassessment after the decision in E. The latest line governs the scope; a restriction or suspension applies from its effective date and is passed to the TRE and the RACI. Review at least every 12 months.

Date	Trigger	Evidence / source	Effect	Scope or control change and effective date	Next review	PI approval (initials / date)
6 Oct 2026	☐ Annual review ☐ CIP amendment ☐ Device or technique change ☑ Safety event (SART) ☐ Complication cluster (CSST) ☐ SLCT review ☐ Privileges or license change ☐ Other	SART-014-002: greater tuberosity fracture in case 2, fixed intraoperatively; PI review 6 Oct	☑ Confirmed ☐ Restricted ☐ Suspended ☐ Restored	No scope change. Proctor reviews the plan for case 3.	After case 5	AM 6 Oct 2026
