PIDLR — POST-INVESTIGATION DEBRIEF AND LESSONS RECORD

STUDY AND PROTOCOL	CIP VERSION	SITE CODE	PIDLR RECORD ID
INVESTIGATION STATUS ☐ Completed ☐ Suspended ☐ Terminated	**DEBRIEF BASIS** ☐ Planned close-out ☐ Early closure ☐ Material learning trigger	**INVESTIGATION PERIOD**	**CLOSE-OUT DATE**
FINAL DATA CUT-OFF	**FINAL SAFETY SUMMARY REFERENCE**	**PREPARED BY AND DATE**	**ACCOUNTABLE REVIEWER**

A Purpose and Use

This record converts the completed investigation experience into a controlled set of transferable lessons, improvements and residual limitations. It is completed after close-out evidence is available, or after a documented early termination or suspension.

It references controlled records; it does not reclassify safety events, replace CAPA, or retrospectively amend the CIP.

Unit of analysis	Decision support	Inputs	Outputs
One completed, suspended or terminated investigation at one site; reviewed at close-out or a justified earlier point.	Whether the site can close the debrief and what must be transferred into its standing practice or tracked beyond it.	MRL close-out evidence, CAPA, final safety records, PIR, IMC, SRR, FUCR, SART, SCML, CSST and source-specific logs.	Controlled changes to SOPs, training, DTRM, CCDM, RACI, IMP, SRR, CAPA or future-study setup; a dated archive record.

Confirm the close-out boundary → Reconstruct what happened → State lessons → Transfer changes → Verify and archive

B Confirm the Debrief Boundary and Inputs

Use exact document IDs or ranges. A missing close-out input does not become a lesson: document the limitation and route it to its controlled receiving record.

Required source or evidence set	Exact record ID or range	Availability	Use in this debrief	Unresolved limitation or receiving route
Worked example · close-out evidence set	*MRL-021-CO-01; CAPA-021-003; PIR-021-Final*	*Complete*	*Supports close-out and learning review*	*None*
Milestone and close-out reconciliation				
Final data completeness and remaining-gap record				
Final device reconciliation and return or disposal evidence				
Final safety summary and linked SART, SCML, CSST records				
CAPA status and effectiveness evidence				
Performance and monitoring outputs, including PIR, IMC and FUCR				
Risk register and residual-risk review				

A debrief may identify a gap in site practice. It must not reopen a clinical record, change a prior safety classification or duplicate a CAPA investigation.

C Reconstruct the Lifecycle at Control Points

Record only the operational summary needed to support a lesson. Keep clinical facts, device details and safety classifications in their authoritative records.

Lifecycle phase or control point	Expected controlled condition	Observed outcome or reference	Evidence ID or range	What worked or limitation	Lesson ID or route
Worked example · Phase 5 follow-up	*PROM administration completed at all required visits*	*Two 12-month PROMs were absent*	*FUCR-021-Final §D; PFVR-021-044, 066*	*Reminder route did not surface omissions before window closure*	*L-001*
Phase 1 · Feasibility					
Phase 2 · Start-up					
Phase 3 · Enrollment					
Phase 4 · Surgery					
Phase 5 · Follow-up					
Phase 6 · Close-out					
Transversal safety stream					

D Synthesize Experience by Operational Domain

A domain entry should state a transferable strength, limitation or dependency. Do not recopy individual deviations, events or participant records.

Operational domain	Strength sustained	Limitation or breakdown	Systemic contributor or context	CTQ impact	Evidence ID or range	Lesson ID
Worked example · Follow-up	*Active reminder process maintained visit attendance*	*PROM completion not confirmed before window close at two visits*	*Ownership of final PROM check not explicit*	*Endpoint completeness*	*FUCR-021-Final; IMC-021-007*	*L-001*
Governance and accountability						
Risk management and escalation						
Surgery and device traceability						
Enrollment and eligibility						
Imaging and assessment reliability						
Follow-up and retention						
Safety surveillance and reporting						
Data integrity and documentation						

E Classify the Lessons and Their Destinations

E1 · Lesson type guide

Retain — keep a practice that demonstrably supported the controlled outcome.	**Change** — revise a practice or control before it is relied on again.
Residual limitation — carry an unresolved constraint into risk, feasibility or future-study planning.	**Escalate** — route a conclusion requiring CAPA, PI, sponsor or governance decision.

E2 · Lessons register

Lesson ID	Domain	Type	Concise transferable lesson	Evidence ID or range	Receiving record to update	Priority
Worked example · L-001	*Follow-up*	*Change*	*Assign a named owner to confirm required PROM completion before a visit window closes*	*FUCR-021-Final §D; IMC-021-007*	*IMP-021-04; SOP-FU-02; TRE*	*High*

F Transfer Lessons into Controlled Change

Open a transfer row only when the lesson changes a controlled practice or requires formal acceptance. Refer to an existing CAPA where it already owns the corrective action.

Lesson ID	Controlled change or action	Receiving record to update	Named owner	Due date	Completion evidence	Verification point
Worked example · L-001	*Add named PROM-completion check before visit window closes*	*SOP-FU-02; IMP-021-04; TRE follow-up module*	*Site Quality Lead*	*30 Nov 2026*	*Controlled document release, role communication and training evidence*	*At next study follow-up review*

The PIDLR records the learning transfer. A CAPA, SRR or other controlled record remains the owner of its own actions and closure criteria.

G Record Residual Limitations and Continuity Needs

Use this section for limits that remain after the investigation. A residual limitation must have a reason, an accountable destination and a future review point.

Residual limitation or uncertainty	Why it cannot close in this investigation	Risk or CTQ impact	Controlled receiving record	Owner and next review	Status
Worked example · long-term PROM retention not yet tested	*No further follow-up window remains in this investigation*	*Future endpoint completeness and retention planning*	*SRR-021-012; next-study feasibility review*	*PI / Quality Lead*	*Open controlled transfer*

H Verify That Learning Has Been Transferred

Verification confirms that a lesson entered a controlled practice. It does not claim that the new practice is effective until the stated verification point is complete.

Transfer action or receiving record	Evidence checked	Transfer result	Next decision
Worked example · L-001 transfer to SOP-FU-02	*Controlled draft, role communication and TRE record*	*Partially effective*	*Confirm performance at first future study follow-up review*

I Close the Debrief and Preserve the Learning Record

Select one status. The debrief closes only when every conclusion has a controlled destination or a written limitation.

Debrief closure status

Closure status	Use when	Select one
Debrief closed	All lessons have an evidence base and a controlled destination; no unresolved debrief limitation remains.	☐
Closed with tracked transfer items	The debrief is complete; controlled actions remain open in their receiving records.	☐
Not ready to close	A lesson, source gap, destination or accountability decision remains unresolved.	☐

Closing rationale, record linkage and archive

Closing rationale and any remaining limitation _____

Exact receiving record(s) _____

Archive location and retention rule _____

☐ SOP or work instruction ☐ CIP amendment request ☐ Training ☐ DTRM ☐ CCDM ☐ RACI ☐ IMP ☐ SRR ☐ CAPA ☐ PI oversight

Controlled closing statement

Quality reviewer preparing this debrief

Name / role _____

Signature _____

Date _____

PI or accountable reviewer

Name / role _____
